Headteacher: Mrs C. Peear

Squeebles Times Tables

Dear Parents and Carers,

Following the trial of Squeebles Times Tables Connect over the summer holidays, we are pleased to let you know that the school has decided to continue using the app and has purchased a licence for the 2026-27 academic year.

Squeebles provides children with a fun and engaging way to practise their times tables, helping them to build confidence and develop greater fluency. Children will be able to use the app both at school and at home, and teachers will also use Squeebles to set multiplication homework throughout the year.

We are asking families, where they are able, to make a voluntary contribution of £3 per child towards the cost of the licence, payable through ParentPay. A parental subscription would usually cost £19.99 for the year, so the school licence provides access at a significantly reduced cost. We are very grateful for any contributions received, as they help us to continue providing resources such as this for our pupils.

Your child's login details will remain the same as those provided for the trial before the summer holidays. A new copy will also be placed in this year's home-school book for easy reference.

On the next page, you will find instructions explaining how to download, install or access the app on each of the supported devices. The app can be used on multiple devices with an internet connection. If you have any difficulties accessing Squeebles or have any questions about your child's login details, please contact your child's class teacher.

Thank you for your continued support in helping your child develop confidence and fluency in their times tables.

Kind regards,

Mrs Liz Russell
SENCO and Maths Lead

Step 1 - Download, install or access the app...

How you access the app will depend on what kind of device you are using.

There are two ways to use Squeebles Times Tables Connect - either by downloading and installing the app from one of the two stores it is available from (the Apple App Store or the Google Play Store) or by visiting the online version and playing directly in your web browser.

- **iPad / iPhone:** Open the Apple App Store app on your iOS device and use the search functionality to search for "Squeebles Times Tables Connect". Or tap [this link](#) whilst on your iPad or iPhone to open the App Store at the correct page.
- **Android:** Open the Google Play Store app on your Android device and use the search functionality to search for "Squeebles Times Tables Connect". Or tap [this link](#) whilst on your device to open the Play Store at the correct page. Repeat the above for every device you want to install the app onto.
- **Chromebook, PC or Mac:** for these devices, you don't have to "install" the app. You can just access it via the internet, using your web browser. Visit <https://play.squeeblesconnect.co.uk/times-tables/> where your child can log in and play online. It may take a few moments to load if it's your first time using it, or if we've just released an updated version. After that it should load more quickly.

Step 2 - Log in and start using the app...

Your child's school should have provided you with their login details for the app. These will take the form of a username and a simple passcode (usually 5 numbers). Make sure you keep these login details safe. The app will remember the last username that was entered on a specific device, but your child will need their passcode each time they log in.

Information about logging in, using the app and how the app's reward system works is all included here: <https://keystagefun.co.uk/connect/support/children/>

Security & Data Protection

What data do we collect?

The only data the app collects about any specific child is their first name and surname. This information is only stored so that your child's school can manage their account. With, in some cases, over 500 children under one school account, it's crucial for teachers to easily be able to know which child's account they are managing or who they are setting homework for.

We also collect the name, town, post code and e-mail address of the school who manage the subscription and the names and e-mail addresses of the teachers who require access to the app. None of this data is shared or published, with the exception of the school name, which will appear in school high score tables. The school name is never publicly linked to a specific child in any way.

How and where is the data stored?

All account data is stored securely on our dedicated servers and will never be shared with any third parties. Data is encrypted in transit using industry standard encryption methods.

Who has access to account data?

The only time anyone outside your child's school would be required to access your child's account data is if a member of the KeyStageFun development / support team needed to look into a specific issue with your child's account. This is highly unlikely, but if that were to be required, they would view the data on the server and then disconnect. This is a VERY small number of people, all of whom work directly with us in the UK. No data would ever be downloaded, stored locally on any individual's computer or sent via e-mail or other messaging platform.

Is any account data published in the public domain?

Your child's name is never published in any publicly accessible place and cannot be viewed by other children who are using the app. High score tables only show usernames or school names. Usernames are randomly created and do not feature your child's name, or any variation of their name.

No other personally identifiable information is collected or published.

Can children use the app to communicate with each other?

No. Definitely not. There is no player-to-player communication within the app and no plans for such a system in the future.

I still have questions. Who can I ask?

If you have any further questions regarding your child's data, or our security procedures, please write to us at info@keystagefun.co.uk and we'll be very happy to help if we can. The below links may also be of use, although please be aware these are general policies and as such only some aspects of them will apply to this particular app.
